

## Individual Line Cleaning

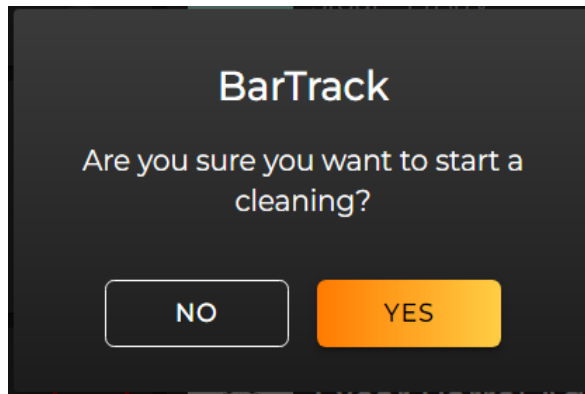

From the “On tap” page, find the beverage you will be performing the cleaning on and then click on the three dots associated with that beverage.

Start Cleaning

The “Start Cleaning” feature allows you to *click* on and off of line cleaning mode when flushing a line with water or cleaning solution in between beverage-style changes. (ex. doppelbock to lager)

## Process for cleaning one line

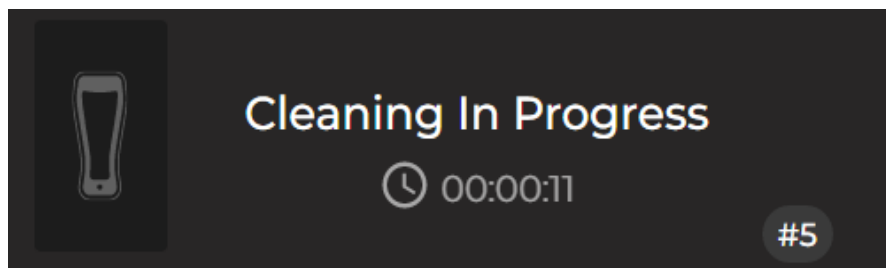

1. **Before emptying out the line, turn on “Start Cleaning”**

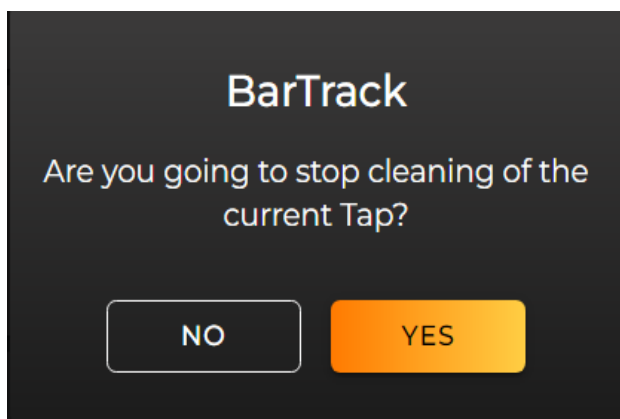

← You will see this pop-up asking if you are sure you want to start a cleaning

← Click YES to confirm.

Now you can see that the beverage tile now says, “Cleaning in Progress” and the timer has started.

2. Empty the beverage out of the line.
3. Perform your line cleaning as usual.
4. Click on the tile to stop the cleaning before you re-tap the keg.

← Click YES to confirm.

5. Re-tap your keg once line cleaning is turned off and refill the line with the beverage.

---

This process takes any waste that occurs during the cleaning and segments it into its own category on your reports. At the end of the week, month, or custom duration of time you can see where and when the waste is occurring in a specified amount.
